## HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

### **DETAILED ACTION**

In response to the Request for Continued Examination (RCE) under 37 CFR 1.114 filed on 7/21/08. Claims 1 and 8-9 have been amended. Claims 1-13 are pending in the current application.

#### ***Allowable Subject Matter***

Claims 1-13 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art of Rimoto has been addressed by the applicant's remarks submitted on 7/21/08. Through a further review of the prior art of record, and in light of the amendments filed in the recent response, the reasons for allowance may be found below:

The claims of the instant invention are directed towards a cursor control method and apparatus for moving a cursor displayed on a display screen to a coordinate position of one of a plurality of points visibly or invisibly set in the display screen in accordance with a designation indicating a moving direction of the cursor in the display screen. The claims of the instant invention discuss the following limitations, "calculating a path which circulates through vicinities of positions of the points on the basis of coordinate positions of the points in the display screen, each of the points being associated with a respective object in an image displayed in the display screen". Additionally, the method and apparatus comprises "calculating a coordinate position of an intersection point of the path and a line segment extending from a predetermined coordinate position in a region surrounded by the calculated path and a line segment extending in a direction indicated by the [a] designation" and moving a display position

of the cursor to the calculated intersection point coordinate position and wherein vicinities of positions of the points are near to the respective coordinate positions of the points.

The closest prior art of record can be found in Robertson et al, which teaches a system and method for computer cursor control. Robertson teaches an invention which moves a cursor displayed on a display screen to a coordinate position of one of a plurality of points visibly or invisibly set in the display screen. Robertson is directed towards producing a more user friendly transition for a user's input while interacting with a program by using a correction vector to attract the cursor to user selectable areas. These areas are dynamic changing as taught by the changes in contact lists when windows are changed. Additionally, the calculation and implementation of the correction vector teaches calculating a coordinate position off an intersection point on a designated path in a line segment extending from the current point of the cursor to the point on a contact list which and creates a gravitational effect towards the point on the display (*see col. 11: In 1-65*). However, Robertson fails to teach the calculation of a path that "circulates through vicinities of positions of the points on the basis of coordinate positions of the points in the display screen". Robertson lacks in teaching the calculation of a path that is involved in the process and does not fairly teach or suggest doing so since its method is to predict where the user to go. In opposition the instant invention creates the path and calculates an intersection point in order to guide the user through user selectable objects that can be implemented or related to the program. As a result the prior art of Robertson does not fairly teach or suggest the requirements of the instant invention and does not teach the inventive improvement of providing a guidance path that can be circulated through the display screen.

Furthermore, Robertson lacks in fairly teaching or suggesting a barycentric position of the points using the coordinate positions of the points.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
